Trello

LAMP Stack

- **L:** Linux operating system.
- **A:** Apache for web server hosting.
- **M:** Mysql for database management.
- **P:** PHP for dynamic web page creation.

Front End

The front end team used multiple technologies to support the creation of the website:

- **HTML:** Used to **structure** the content on the webpage.
- **CSS:** Used to **style** the content on the webpage.
- **JavaScript:** Used to add **interaction and functionality** to the webpage.

API

The API team mainly relied on **PHP** to create the interactive CRUDES controls however used other technologies for testing and documentation:

- **PostMan:**
- **SwaggerHub:**

DataBase

The database...

Project Management

The project management was done mainly through the following technologies:

- **Trello** - Gantt Chart and Item Tracking
- **Discord** - Team communication and meetings
- **Github** - Project Version Control.
- **Lighthouse**
-
